Learn and Implement React		10
Creative Portion		**20 Points**
Best Practices		**5 Points**
Site is visually appealing		2
Easy to Use/Navigate		3
Submit Rubric to GitHub		**5 Points**
TOTAL		**100 Points**
Project Description (General)		
We will be designing and creating a website for a photography company. The website will consist of: a login for the user to be able to access their photo albums where they can download photos, sort through photos with filters, and add comments to albums. The website will also have a portfolio page where the photographer will have a presentation of their best photos for the clients/users to view.
